Executive Summary

Content

Oxford Green Riverside Developments retained Paradigm Transportation Solutions Limited (Paradigm) to conduct this Transportation Impact Study (TIS) for a proposed mixed-use redevelopment near the corner of Geddes Street and East Mill Street in Elora, Ontario.

This TIS analyzes existing traffic conditions, provides a description of the proposed redevelopment, forecasts traffic to a five-year horizon beyond the assumed build-out year (2023), and recommends any required improvements.

Development Concept

The redevelopment plan proposes a five-storey (plus loft) building with 18 residential units and 628 square metres (6,760 square feet) of ground floor commercial (GFA).

Vehicle access is proposed via a driveway connection to parking partially underground off Geddes Street.

The development is assumed to be completed by 2023.

Conclusions

Based on the investigations carried out, it is concluded that:

- ▶ **Existing Traffic Conditions:** All study area intersections are currently operating at acceptable levels of service with no specific problem movements.
- ▶ **Development Trip Generation:** The development is forecast to generate approximately 44 and 73 trips during the AM and PM peak hours upon full build-out.
- ▶ **2028 Background Traffic Conditions:** All study area intersections are forecast to operate at acceptable levels of service with no critical movements during the weekday AM and PM peak hours.
- ▶ **2028 Total Traffic Conditions:** All study area intersections are forecast to operate at acceptable levels of service with no critical movements during the weekday AM and PM peak hours.

With the addition of the site-generated traffic volumes, the overall intersection delays at the study area intersections

increase by two seconds or less during the AM and PM peak hours.

- ▶ **Remedial Measures:** A westbound left-turn lane is not warranted at the intersection of East Mill Street and Geddes Street.

Recommendations

Based on the findings of this study, it is recommended that the development be approved with no conditions related to off-site transportation improvements.

1 Introduction

1.1 Overview

Oxford Green Riverside Developments retained Paradigm Transportation Solutions Limited (Paradigm) was retained to conduct this Transportation Impact Study (TIS) for a mixed-use redevelopment at 19 East Mill Street in Elora, Ontario. **Figure 1.1** illustrates the site location.

This study determines the impacts of the additional traffic on the surrounding road network and identifies the necessary remedial measures necessary required to accommodate future traffic in a satisfactory manner. The scope of the study includes:

- ▶ Assessing current traffic and site conditions within the study area;
- ▶ Forecasting future non-development (background) traffic growth;
- ▶ Forecasting site-generated traffic;
- ▶ Analysing future traffic impacts on the surrounding road network five-years after the assumed full build-out year; and
- ▶ Recommending any necessary mitigation.

The study scope was developed in consultation with the Wellington County and the Township of Centre Wellington in June 2022.

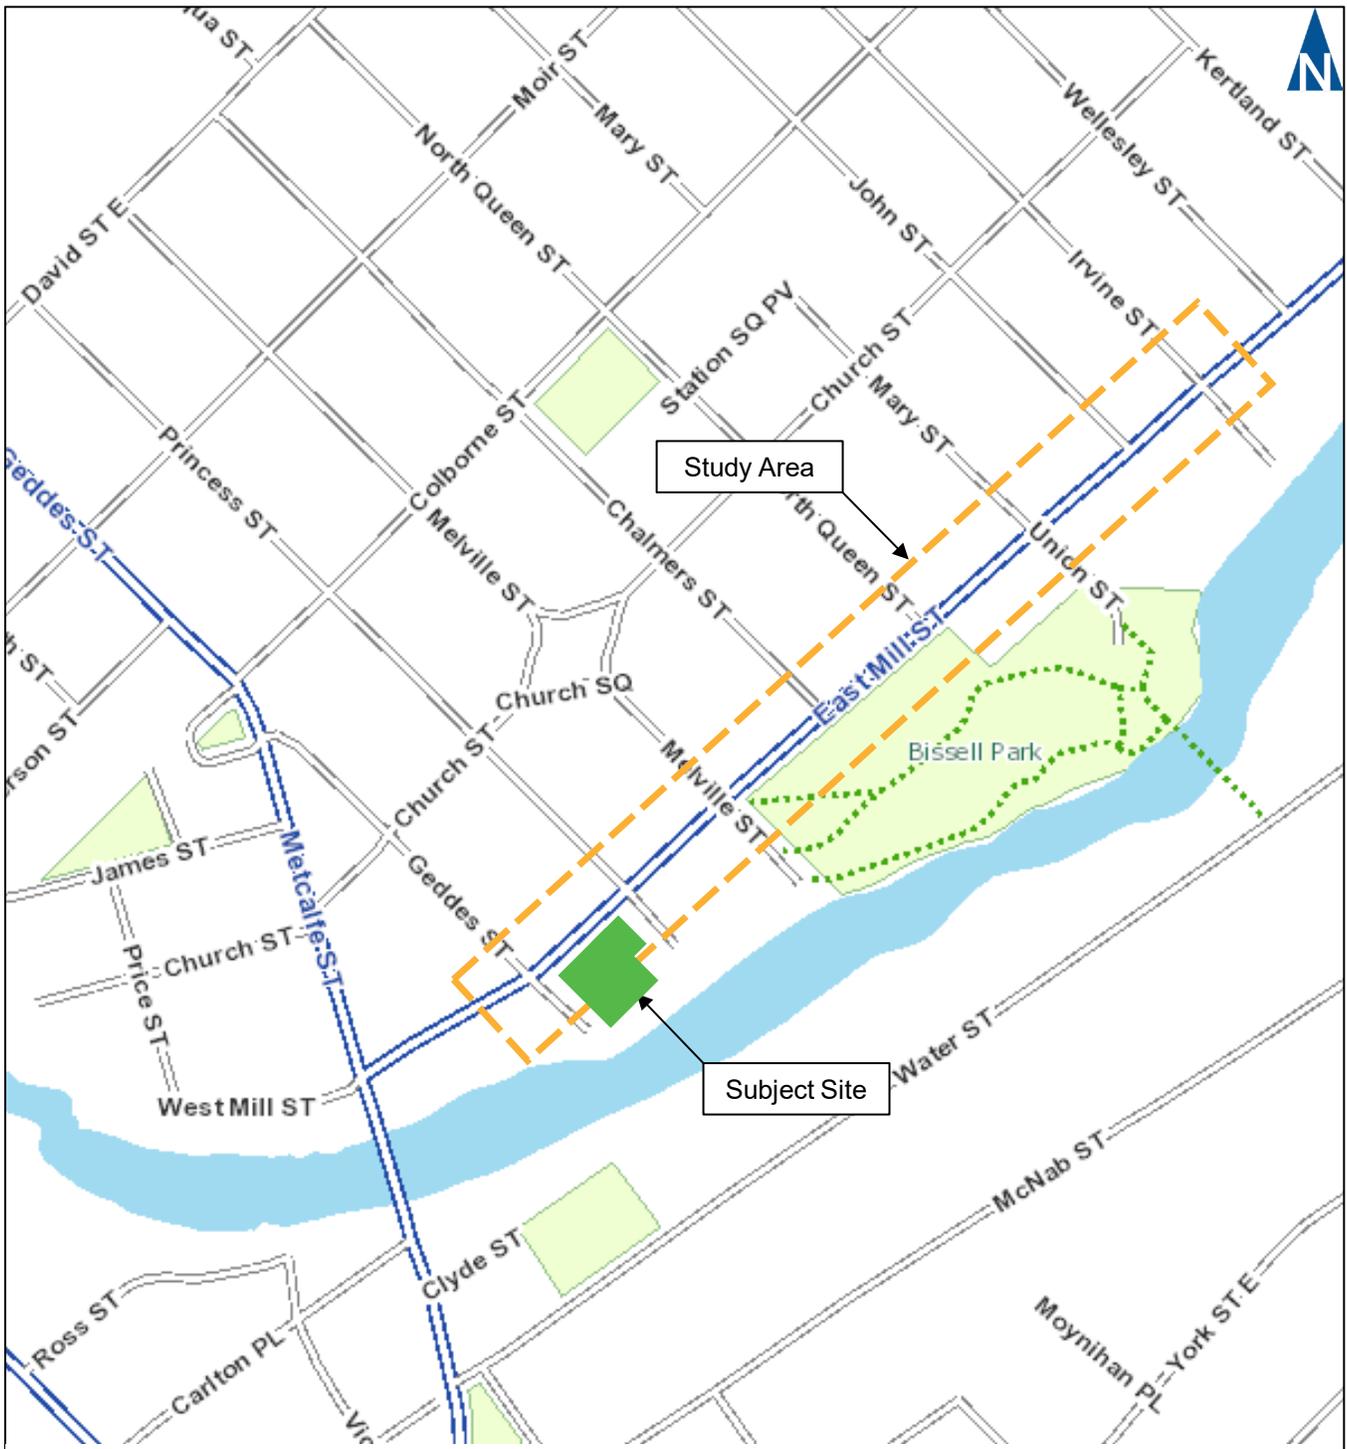

Appendix A contains the pre-study consultation material and response from the County and Township.

1.2 Study Area

The intersection assessed in this study includes:

- ▶ Geddes Street and East Mill Street (unsignalized); and
- ▶ Irvine Street and East Mill Street (unsignalized).

NTS

Figure 1.1

2 Existing Conditions

2.1 Road Characteristics

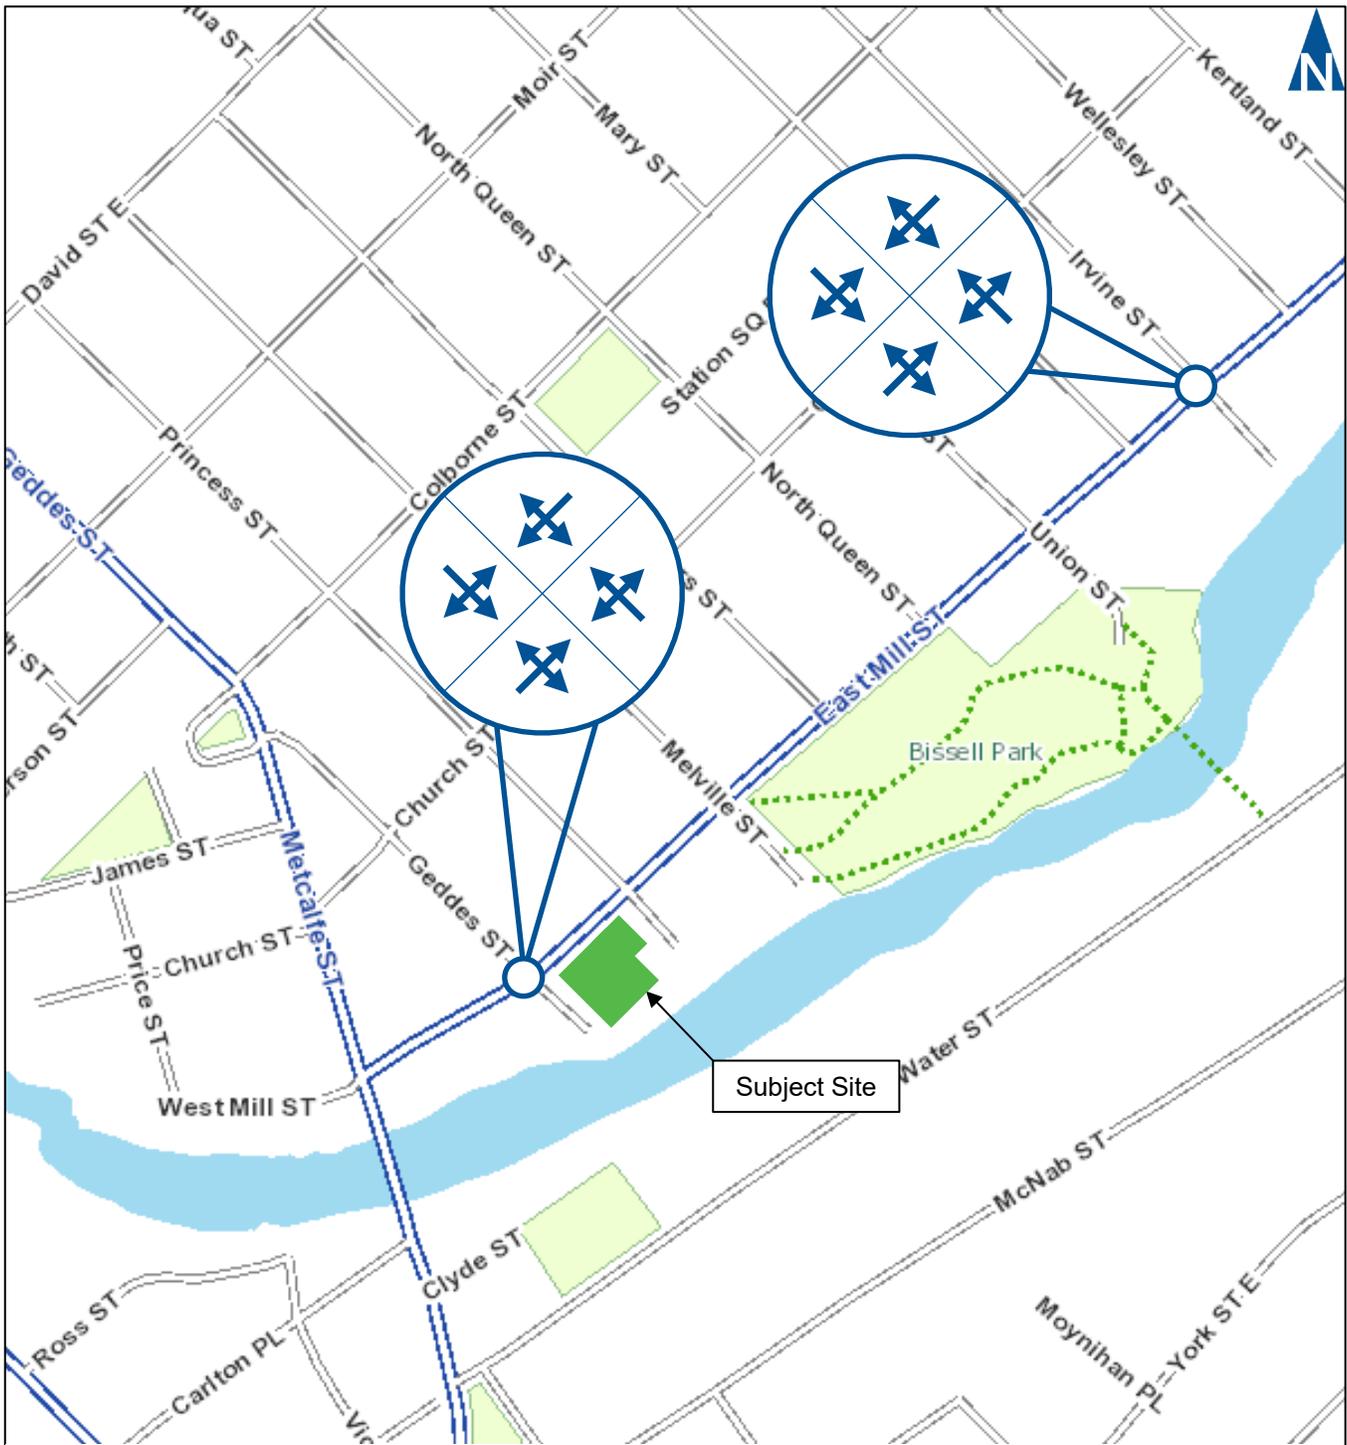

The roadways of interest within the study area include Township of Centre Wellington roads (Geddes Street and Irvine Street and Wellington County¹ roads (East Mill Street and Geddes Street) are generally described as:

- ▶ **East Mill Street (County Road 18)** is a two-lane arterial road with a speed limit of 40 km/h within the study area. Sidewalks are on both sides of the roadway except east of Geddes Street, where it is only on the north side.
- ▶ **Irvine Street** is a two-lane local road south of David Street changing to a collector road north of David Street. The posted speed limit is 50 km/h except between Moir Street and Walser Street where it is 40 km/h. There is a sidewalk on the east side of the roadway except between Church Street and Colborne Street where no sidewalk is present.
- ▶ **Geddes Street** is a two-lane, 50 km/h local road that transitions to an arterial road north of Metcalfe Street. Sidewalks are provided on both sides of the roadway except for a portion approximately between Church Street and Metcalfe Street where none exists on the west side of Geddes Street.

Figure 2.1 details the existing traffic control and lane configurations at the study area intersections.

¹ Township of Centre Wellington, *Municipal Official Plan: Schedule B – Municipal Servicing Plan Fergus-Elora-Salem*, (Elora: Township of Centre Wellington, 2013).

Existing Lane Configuration & Traffic Control

2.2 Active Transportation

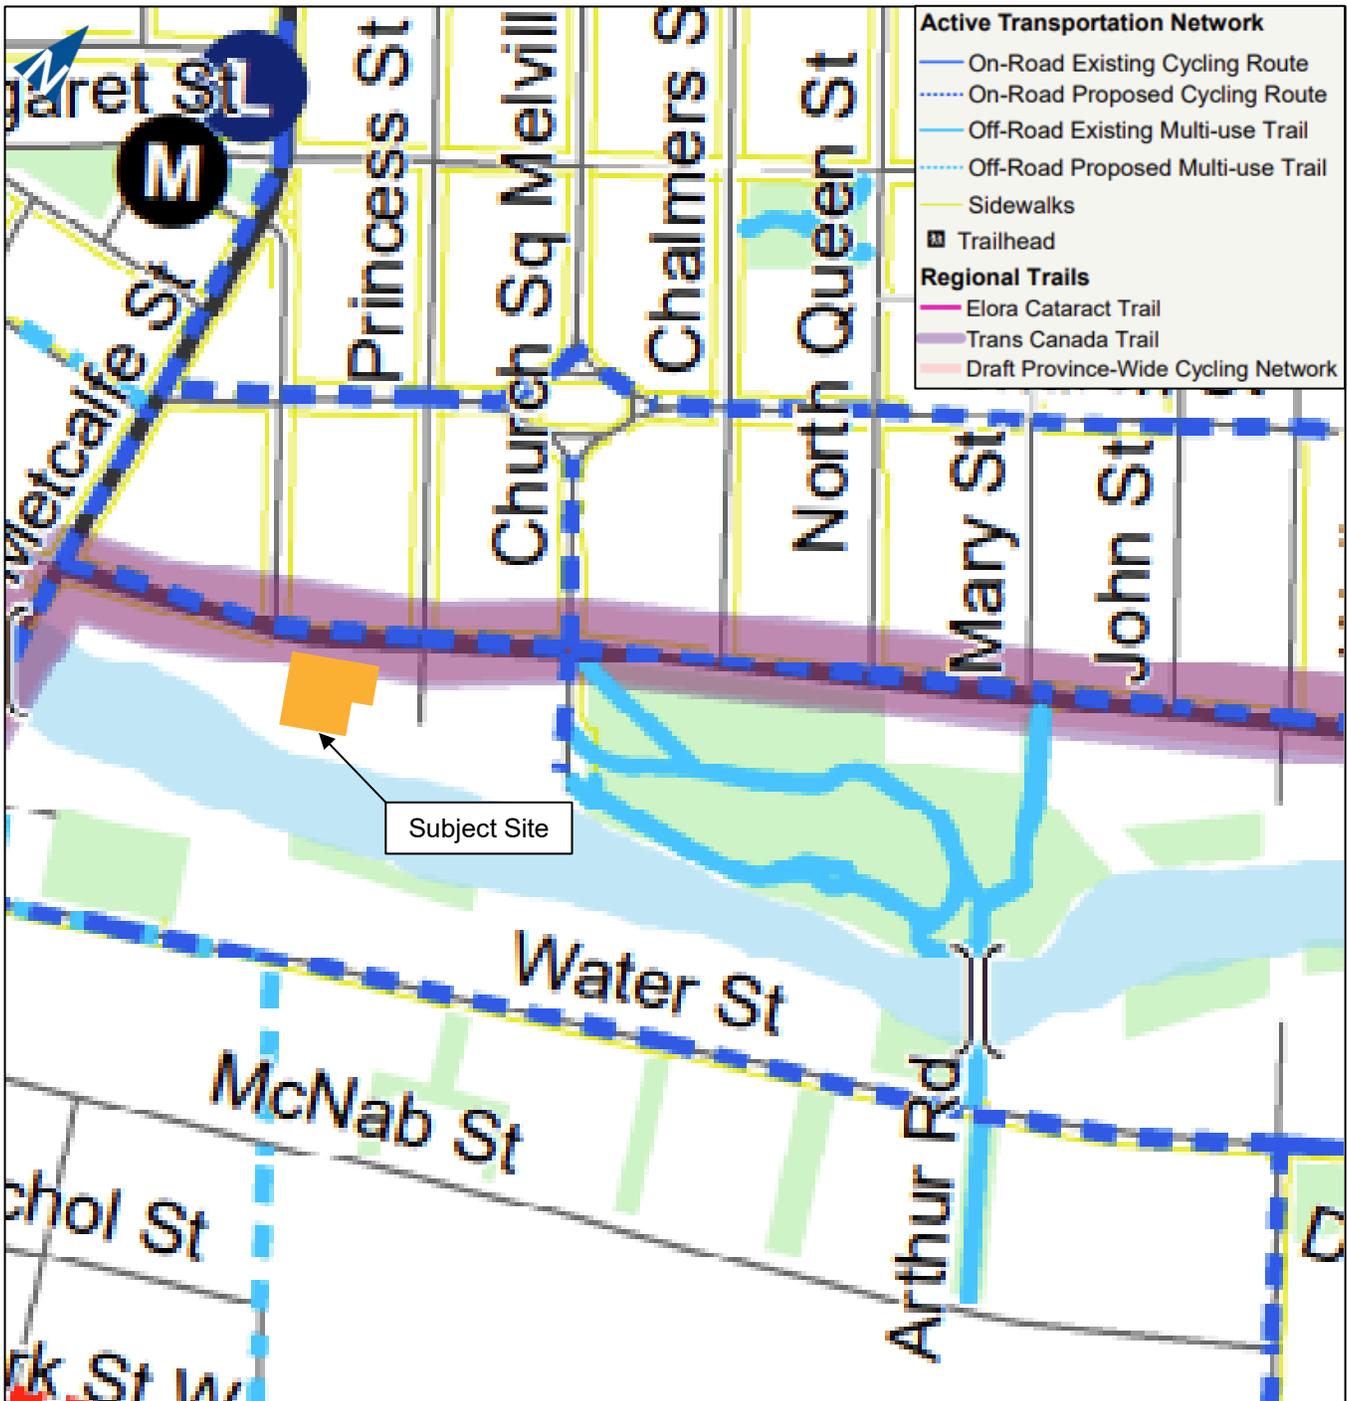

Figure 2.2 illustrates the existing trail network. The existing trail network infrastructure includes:

- ▶ Trail loops running along East Mill Street; and
- ▶ The Grand Valley Trail running along Church Street to the north of the subject site.

Figure 2.3 illustrates the proposed network for active transportation. The identified improvements include:

- ▶ An on-road cycling route on East Mill Street;
- ▶ An on-road cycling route on Metcalfe Street;
- ▶ An on-road cycling route on Church Street north of the site;
- ▶ An on-road cycling route (on-road) on Melville Street between East Mill Street and Church Street; and
- ▶ A multi-use path on Church Street, west of Metcalfe Street.

Proposed Network for Active Transportation

2.3 Transit Service

Guelph Owen Sound Transit² operates near the study area:

- ▶ The route operates between Guelph and Owen Sound. The route operates Monday to Sunday from 7:30 AM to 9:50 AM, 10:40 AM to 1:00 PM, 2:30 PM to 4:50 PM, and 5:30 PM to 7:50 PM.

The closest transit stop is approximately 300 metres (4-minute walk) away at 25 Metcalfe Street.

Figure 2.4 illustrates the existing transit network.

2.4 Traffic Volumes

Paradigm undertook turning movement counts at the study area intersections in February 2022 and May 2022.

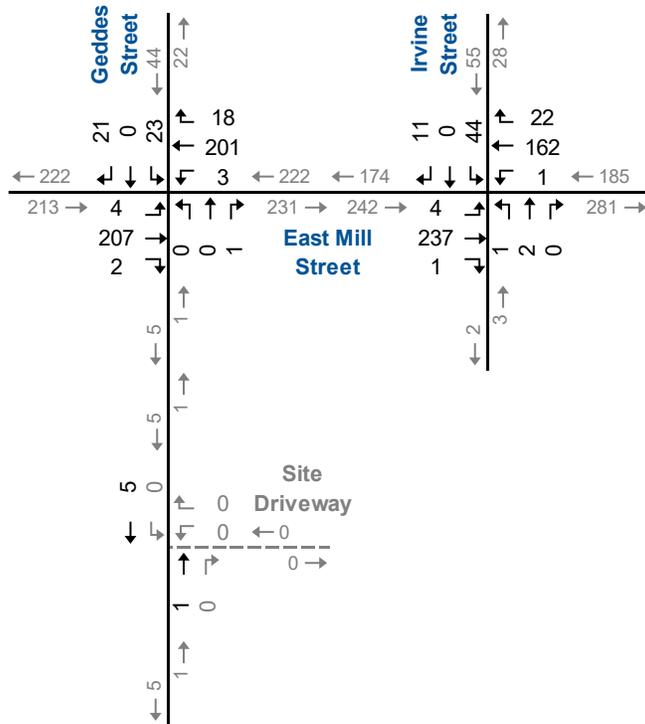

Appendix B contains the observed traffic counts for the study area intersections.

Figure 2.5 illustrate the base year weekday AM and PM peak hour traffic volumes.

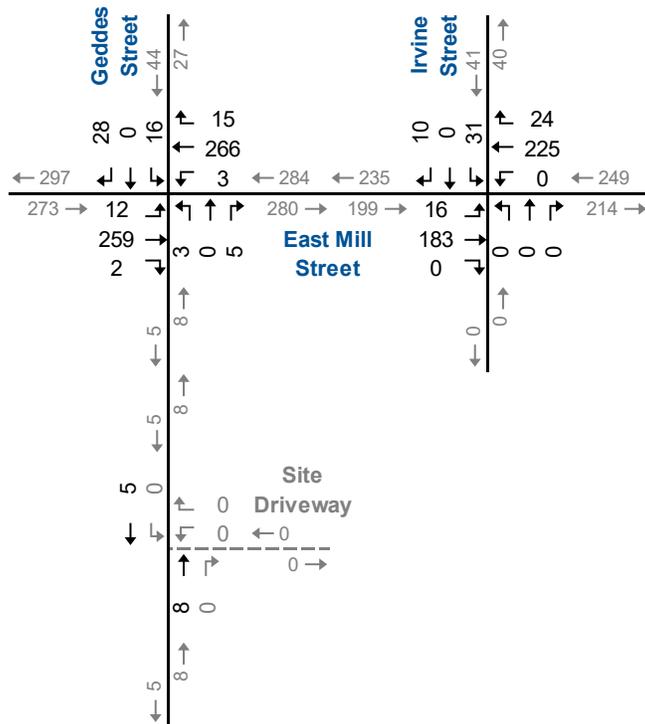

AM Peak Hour

PM Peak Hour

Base Year Traffic Volumes

Figure 2.5

2.5 Traffic Operations

Intersection level of service (LOS) is a recognized method of quantifying the average delay experienced by drivers at intersections. It is based on the delay experienced by individual vehicles executing the various movements. The delay is related to the number of vehicles intending to make a particular movement, compared to the estimated capacity for that movement. The capacity is based on a number of criteria related to the opposing traffic flows and intersection geometry.

The highest possible rating is LOS A, under which the average total delay is equal or less than 10.0 seconds per vehicle. When the average delay exceeds 80 seconds for signalized intersections, 50 seconds for unsignalized intersections or when the volume to capacity ratio is greater than 1.0, the movement is classed as LOS F and remedial measures are usually implemented if they are feasible. LOS E is usually used as a guideline for the determination of road improvement needs on through lanes, while LOS F may be acceptable for left-turn movements at peak times, depending on delays.

The operations of the study intersections were evaluated using the existing lane configurations, traffic controls, and the base year traffic peak hour volumes.

The level of service conditions on the existing road network have been assessed using Synchro 10. As noted in Wellington County TIS guidelines³, movements are considered critical under the following conditions:

- ▶ Volume/capacity (V/C) ratios for overall intersection operations, through movements or shared through/turning movements increased to 0.85 or above (signalized intersections);
- ▶ V/C ratios for dedicated turning movements that exceed 0.90 (signalized intersections);
- ▶ LOS E or F for the global performance at unsignalized intersections; and
- ▶ 95th percentile queue lengths for individual movements exceed available lane storage.

Table 2.1 summarizes the existing intersection operations. The entries in the table indicating the AM and PM peak hour level of service (LOS),

³ Dillon Consulting, *Wellington County Road Action Master Plan: Appendix G Traffic Impact Study Guidelines*, (Guelph: Wellington County, 2021).

volume to capacity ratios (V/C), and 95th percentile queues experienced.

All study are intersections are currently operating at acceptable levels of service with no specific problem movements. **Appendix C** contains the detailed Synchro reports.

3 Development Concept

3.1 Development Description

The subject site is located near the corner of Geddes Street and East Mill Street in Elora, Ontario.

The redevelopment plan proposes a five-storey (plus loft) building with 18 residential units and 628 square metres (6,760 square feet) of ground floor commercial (GFA).

Vehicle access is proposed via a single all-moves driveway connection to parking partially underground from Geddes Street.

The development is assumed to be completed by 2023.

Figure 3.1 shows the proposed development concept.

3.2 Site Trip Generation

The Institute of Transportation Engineers (ITE) Trip Generation⁴ provides methods predict the site trip generation. The following Land Use Codes (LUC) were used to estimate the site trip generation:

- ▶ LUC 220 (Multifamily Housing, Low-Rise); and
- ▶ LUC 822 (Strip Retail Plaza, <40k).

The regression equation rates for LUC 220 and the average rates for LUC 822 were used to calculate the site trips. **Table 3.1** summarizes the forecast site-generated trips. The entries in the table indicate that at full build-out the site is forecast to generate 44 AM peak hour trips and 73 PM peak hour trips. No reductions for alternative modes of transportation were used.

LUC 220 was selected for the residential component trip generation because of the size of the subject site surroundings. Elora residents do not have access to local public transit increasing reliance on personal vehicles. The trip generation for the residential component is therefore likely conservative.

TABLE 3.1: FORECAST SITE-GENERATED TRIPS

Land Use	QTY	AM Peak Hour			PM Peak Hour				
		Rate	In	Out	Total	Rate	In	Out	Total
LUC 220 - Multi-Family Housing (Low-Rise)	18 Units	Eq	7	21	28	Eq	18	10	28
LUC 822 - Strip Retail Plaza (<40k)	6.76 GLA/1000 ft ²	Avg	10	6	16	Eq	22	23	45
Total Trip Generation			17	27	44		40	33	73

LUC 220 - AM: $T = 0.31(X) + 22.85$ | PM: $T = 0.43(X) + 20.55$

LUC 822 - AM: AVG = 2.36 | PM: AVG = 6.59

The trip distribution used for this study was based on the existing distribution and the most recent Transportation Tomorrow Survey⁵ (TTS) data that provides the travel patterns of Elora residents including trips to Waterloo Region and Guelph. Trip assignment followed the local routing choices revealed in the observed traffic counts **Table 3.2**.

Site Generated Traffic Volumes

4 Evaluation of Future Traffic Conditions

The assessment of the future traffic conditions contained in this section includes the future traffic forecasts as well as the level of service analysis. A five-year horizon following the anticipated build-out of the subject site (2023) was assessed to determine traffic impacts.

4.1 2028 Background Horizon

4.1.1 2028 Background Traffic Growth

The 2028 background traffic volumes reflect a Township-provided annual growth rate of 2.0% per annum applied to the existing volumes.

No other background developments were identified by the Township or County.

Figure 4.1 illustrates the forecast 2028 background traffic volumes for the weekday AM and PM peak hours.

4.1.2 2028 Background Traffic Operations

The operations at the study area intersections followed the same methodology used for the existing traffic conditions. **Table 4.1** details the level of service conditions.

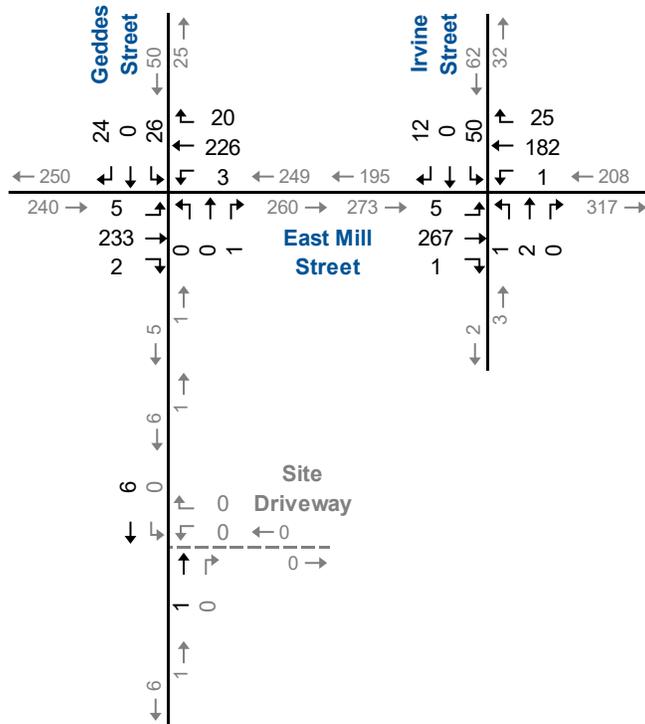

All study area intersections are forecast to operate at acceptable levels of service with no critical movements during the weekday AM and PM peak hours.

Appendix D contains the supporting detailed Synchro 10 reports.

4.2 2028 Total Traffic Horizon

4.2.1 2028 Total Traffic Volumes

Figure 4.2 illustrates the forecast 2028 total (background + site traffic) traffic volumes.

4.2.2 2028 Total Traffic Operations

The study area intersection operations analysis followed the same methodology used for the existing and background traffic conditions.

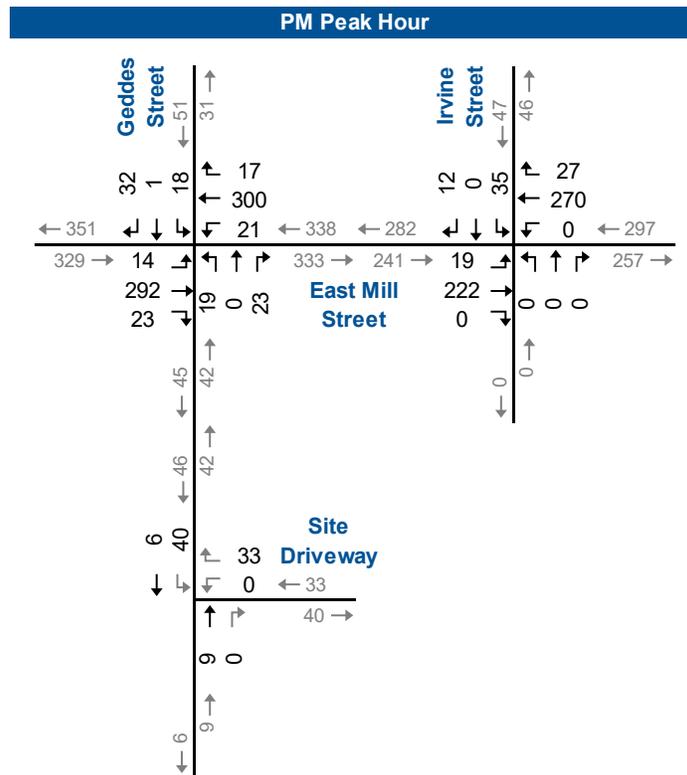

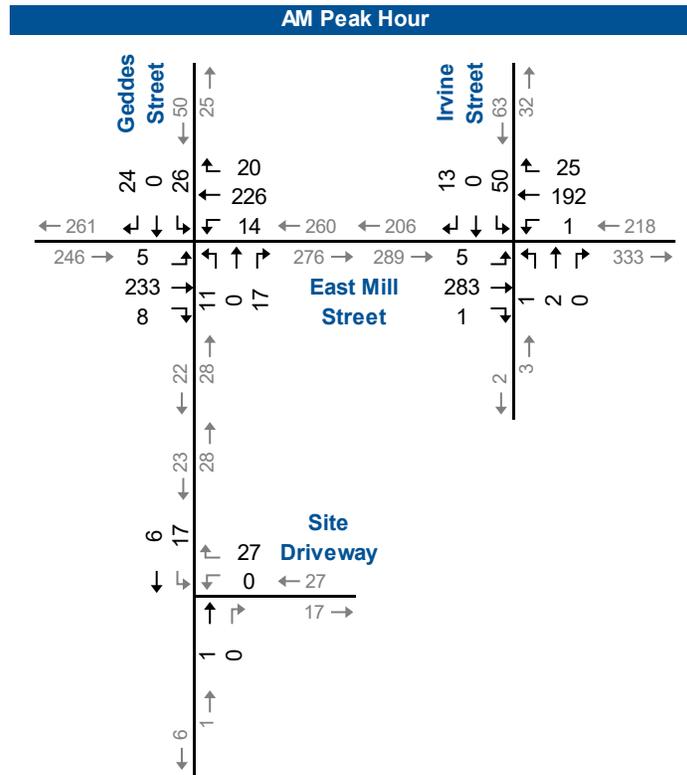

Table 4.2 details the level of service conditions for the weekday AM and PM peak hours.

All study area intersections are forecast to operate at acceptable levels of service with no critical movements during the weekday AM and PM peak hours.

With the addition of the site generated traffic volumes, the overall intersection delays at the study area intersections increase by two seconds, or less, during the AM and PM peak hours.

Appendix E contains the supporting detailed Synchro 11 reports.

5 Remedial Measures

5.1 Left-Turn Lanes

The intersection of East Mill Street and Geddes Street was assessed to determine if the projected traffic volumes warrant installation of a westbound left-turn lane. The warrants for left-turn lanes follow the requirements in the Ministry of Transportation's (MTO) Design Supplement for TAC Geometric Design Guide for Canadian Roads⁶. A design speed of 50 km/h (10 km/h over the posted speed limit) was used for East Mill Street.

The percentages of left-turning vehicles in the approaching volume were rounded to the nearest 5% to make use of nomographs provided.

Table 5.1 summarizes the left-turn lane warrant for the intersection of East Mill Street and Geddes Street. The analysis indicates that a westbound left-turn lane is not warranted at a planning horizon five years beyond full buildout and occupancy.

TABLE 5.1: LEFT-TURN LANE WARRANT SUMMARY – EAST MILL STREET

Roadway	East Mill Street	
Intersection	Geddes Street	
Approach Direction	Westbound	
Design Speed	50 km/h	
Horizon	Total 2028	
Peak Hour	AM	PM

6 Conclusions and Recommendations

6.1 Conclusions

Based on the investigations carried out, it is concluded that:

- ▶ **Existing Traffic Conditions:** All study area intersections are currently operating at acceptable levels of service with no specific problem movements.
- ▶ **Development Trip Generation:** The development is forecast to generate approximately 44 and 73 trips during the AM and PM peak hours upon full build-out.
- ▶ **2028 Background Traffic Conditions:** All study area intersections are forecast to operate at acceptable levels of service with no critical movements during the weekday AM and PM peak hours.
- ▶ **2028 Total Traffic Conditions:** All study area intersections are forecast to operate at acceptable levels of service with no critical movements during the weekday AM and PM peak hours.

With the addition of the site-generated traffic volumes, the overall intersection delays at the study area intersections increase by two seconds or less during the AM and PM peak hours.

- ▶ **Remedial Measures:** A westbound left-turn lane is not warranted at the intersection of East Mill Street and Geddes Street.

6.2 Recommendations

Based on the findings of this study, it is recommended that the development be approved with no conditions related to off-site transportation improvements.

Pre-Study Consultation

From: Pasquale Costanzo <pasqualec@wellington.ca>
Sent: June 6, 2022 11:10 AM
To: Erica Bayley; Andrew Orr
Cc: Lee Wheildon
Subject: RE: 19 Mill Street, Elora TIA

Hi Erica,

I have an additional intersection requirement of East Mill Street at Irvine Street and I don't know of any to be built developments on County roads in the vicinity of this one.

If you have any questions please let me know.
Take care

Pasquale Costanzo, C.E.T., CMMII Infrastructure Specialist
Technical Services Supervisor

Andrew,

Please see Township Staff's comments below in red.

As noted below, County Staff may have additional comments regarding a terms of reference for the proposed TIS.

Should you have any questions or concerns, please do not hesitate to contact me.

Regards,

Lee Wheildon C.E.T.,rcca | Engineering Technologist - Development

Subject: 19 Mill Street, Elora TIA

Hello Lee and Pasquale,

We are preparing a TIA for a proposed residential development located at 19 Mill Street in Elora, ON. (prelim concept attached).

We'd like to prepare our report based on the following scope, subject to your comments:

PROPOSED TERMS OF REFERENCE

Study Area Intersections:

- Geddes Street & Mill Street (unsignalized);

Analysis Periods:

- Weekday AM peak hour
- Weekday PM peak hour

Existing Data:

- Existing 8-hour TMC data for the above noted intersections.

Horizon Year

- Five-years from the full buildout

Analysis

- Synchro 10, HCM 6 analysis

Background Traffic

- Background traffic annual growth rate. **As a base line, 2% annual growth**
- Other Approved but not yet built developments to include in background. **The County of Wellington may wish to speak to this.**

Future Road Improvements:

- **East Mill Street (Metcalfe Street to Melville Street) scheduled for 2023 reconstruction (pending 2023 budget approval from Council)**

Trip Generation

- ITE Trip Generation Data 11th Edition with no modal split reductions.

Site Traffic Distribution

- Existing Traffic Patterns.
